

AI GOT YOU ANXIOUS? WORKFORCE PLANNING SETTLE YOUR NERUES.

It's the Right Time for Workforce Planning

In our **April newsletter**, we discussed why strategic workforce planning (SWP) is essential for aligning talent strategies with business goals. Yet many organizations struggle to plan effectively in the face of constantly shifting workforce dynamics—generating a gap between strategic intent and actual outcomes, and often fueling stakeholder resistance. We proposed a shift in mindset: redefining KPIs to better capture workforce conditions and turn strategy into reality. In this month's newsletter, we'd like to continue the conversation about how

to overcome resistance to change and turn strategy into action. This time, let's explore anxieties around agentic AI and see how SWP can be the cure.

RECAP: Key Takeaways from UNLEASH and SWP Conferences This May, the Vemo team attended both UNLEASH America in Las Vegas

and the Strategic Workforce Planning (SWP) Conference in Chicago. The key takeaway from both events: organizations are entering a complex transition as they begin redesigning their workforces around agentic Al. According to keynote speakers at UNLEASH, 92% of business leaders are heavily investing in AI, yet 64% of attendees report lacking an Al strategy-highlighting a significant execution gap in today's workforce. We explored how AI is fundamentally challenging HR-transforming technology, shifting workforce dynamics, and disrupting the market.

Keynote speakers shed light on the top anxieties HR leaders have about agentic AI, including:

- Uncertainty about changing job roles
- Changing HR technology and disrupting the market
- Issues with organizational readiness

strategic advantage. AI: WHAT IS IT AND HOW IS IT SHAPING THE FUTURE OF THE

strengths and limitations, examine the risks it poses to workforce strategy-

In this newsletter, we'll unpack what agentic AI really is, explore its

and share our top recommendations for turning this disruption into a

WORKFORCE? Top speakers at both conferences described AI as a computational system that

independently observes, decides, and acts to achieve specific goals.

KEY FEATURES OF AI

- Quickly automates human skills and capabilities Can more quickly iterate through solutions and outcomes than some
- humans • Enables people to "supercharge" their own work
- **TOP ANXIETIES ABOUT AI**

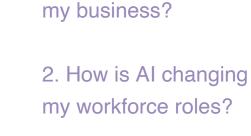

During our keynote at the SWP Conference in Chicago, we asked attendees to

share their greatest AI/SWP anxiety. More than half responded that these were their greatest anxieties about Al: 1. How is AI changing

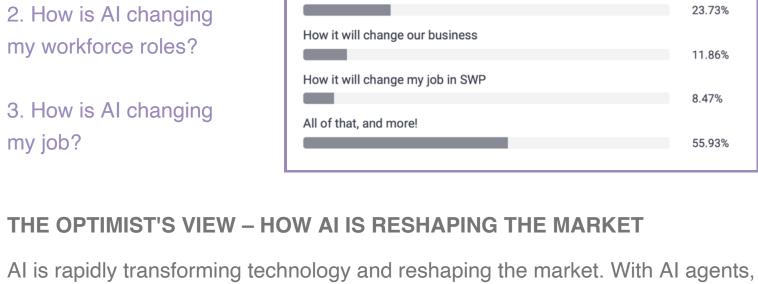

How it will change my workforce

Q1: What is your greatest AI/SWP anxiety?

3. How is AI changing my job?

workers are becoming "superworkers"-not replaced by digital tools, but

enhanced by them. Rather than operating independently, Al agents boost productivity by enabling faster, more efficient performance. As Al automates and augments skills, those capabilities become easier and more cost-effective for organizations to implement. In this evolving market, incumbent organizations risk displacement. To stay competitive, they must learn to manage and analyze new workforce data to

better identify skills gaps. At the same time, AI introduces new workforce anxieties. Fear of automation and job replacement fuels resistance to Al adoption. But adaptation to emerging technologies is no longer optional. Newer competitors-more agile and technologically savvy-are quickly gaining a competitive edge by embracing advanced technologies. The Future in Focus: Two Key Shifts

Rather than hindering the data, the market disruption caused by Al has revolutionized the use of data. Al and Machine Learning (ML) enable launching

workforce planning initiatives with unprecedented speed. The bottleneck isn't the data or the forecasts anymore—it's knowing what to do with them. The speed at which AI now pulls, augments, and models internal and external data makes it possible to launch a workforce planning initiative in weeks, not years. For every job role and skill, SWP with AI and ML integrates internal workforce intelligence with external labor market intelligence, driving strategic workforce

management, enabling you to understand your gaps better

AI ENABLES THE MATRIX ORGANIZATION:

The traditional org chart leads to inefficient resource allocation and risk from competition. Although the matrix organization is not a novel concept, it has historically fallen short due to friction implementing it in most

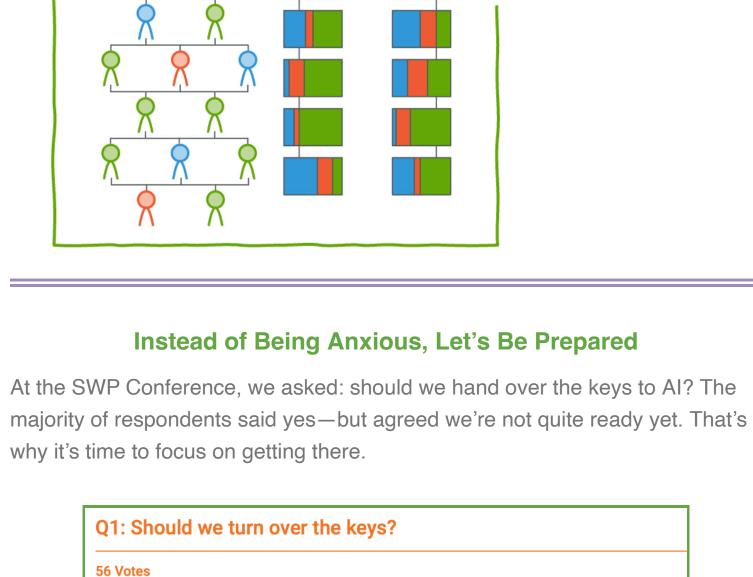

workforces. Al has the potential to absolve that friction and better fit

people to work. This will allow career managers to develop a competitive

workforce and functional managers to plan work performed by both

humans and agents

C TEAM PRIMARY SKILLS FUNCTIONAL CAREER MANAGERS MANAGERS SHOULD be shifted to AI OCOULD be shifted to AI EMPLOYEES Human skills

planning?"

2. What kind of workforce — and by extension, what kind of organization are we actually trying to build?

To plan effectively in this new market, we need to change the conversation. Instead of asking "Should we use AI?" try asking "Where does AI offer the highest measurable value?"

TOP TIP: ATTACK A PROBLEM, NOT THE TECHNOLOGY

It might be in research development, sales, or technology adoption. The goal isn't to make AI the most advanced component of your workforce-it's to make Al the most useful tool in your organization. LOOK LIKE? We're entering a new era-one where career planning and task planning are beginning to converge.

In workforce planning terms, this means a closer integration between strategic
